

Project #07

Pattern, Form, & Texture

Part One Example

Pattern Denied

Part Two Example

Motif and Pattern

Pattern Denied & Motif and Pattern (Two Parts)

Motif: A motif is a shape or group of shapes that when repeated in a regular spatial interval forms a pattern. In this exercise you will **select a letter** form as the motif.

Part One

TO NOT form a pattern with the repeated shape but through placing the motif to achieve as much variety in the background space any pattern will be denied.

To get the most variety in the background you will utilize a variety of **shape placement** strategies including: overlapping, abutting, and cropping.

Part Two

Part two requires using the motif to form a patterned interval. Hide the pattern through manipulating the compositions value and texture.

Value is determined by the relative lightness or darkness of a surface. Texture is the surface quality of an object or shape. In effect the pattern will be disguised or camouflaged

Two Ground sheets, each 8.5 in x 11 in.
